

CSS - Positioning

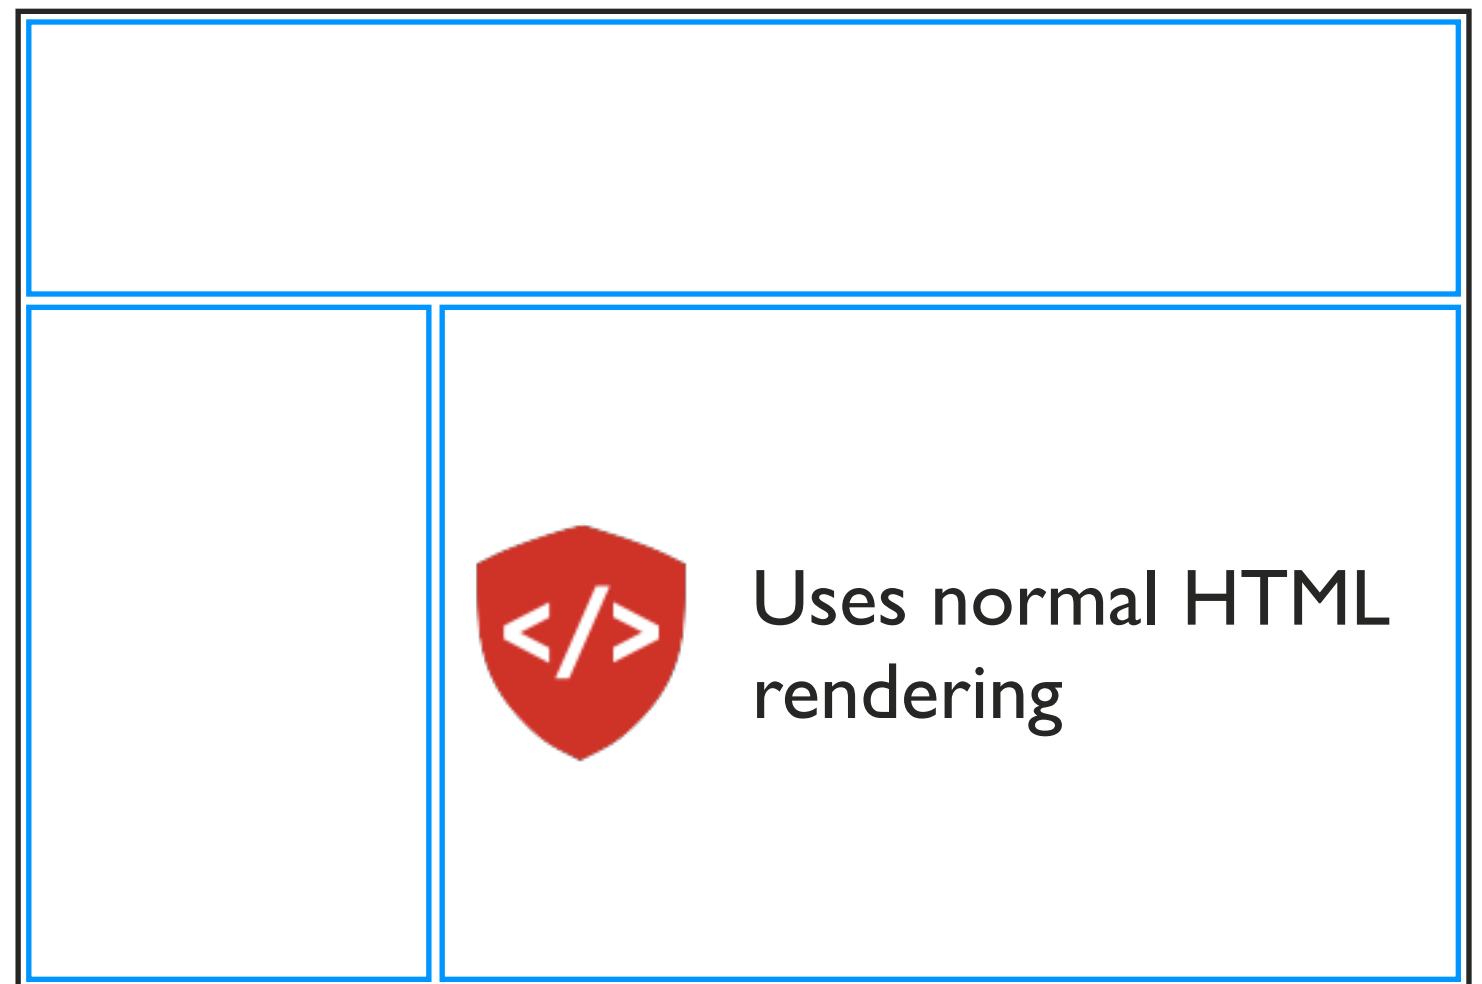

Placing Elements Where You Want Them

CSS

Positioning

An element can be positioned in 1 of 4 ways:

- **Static**
Positioning statements have no effect

CSS

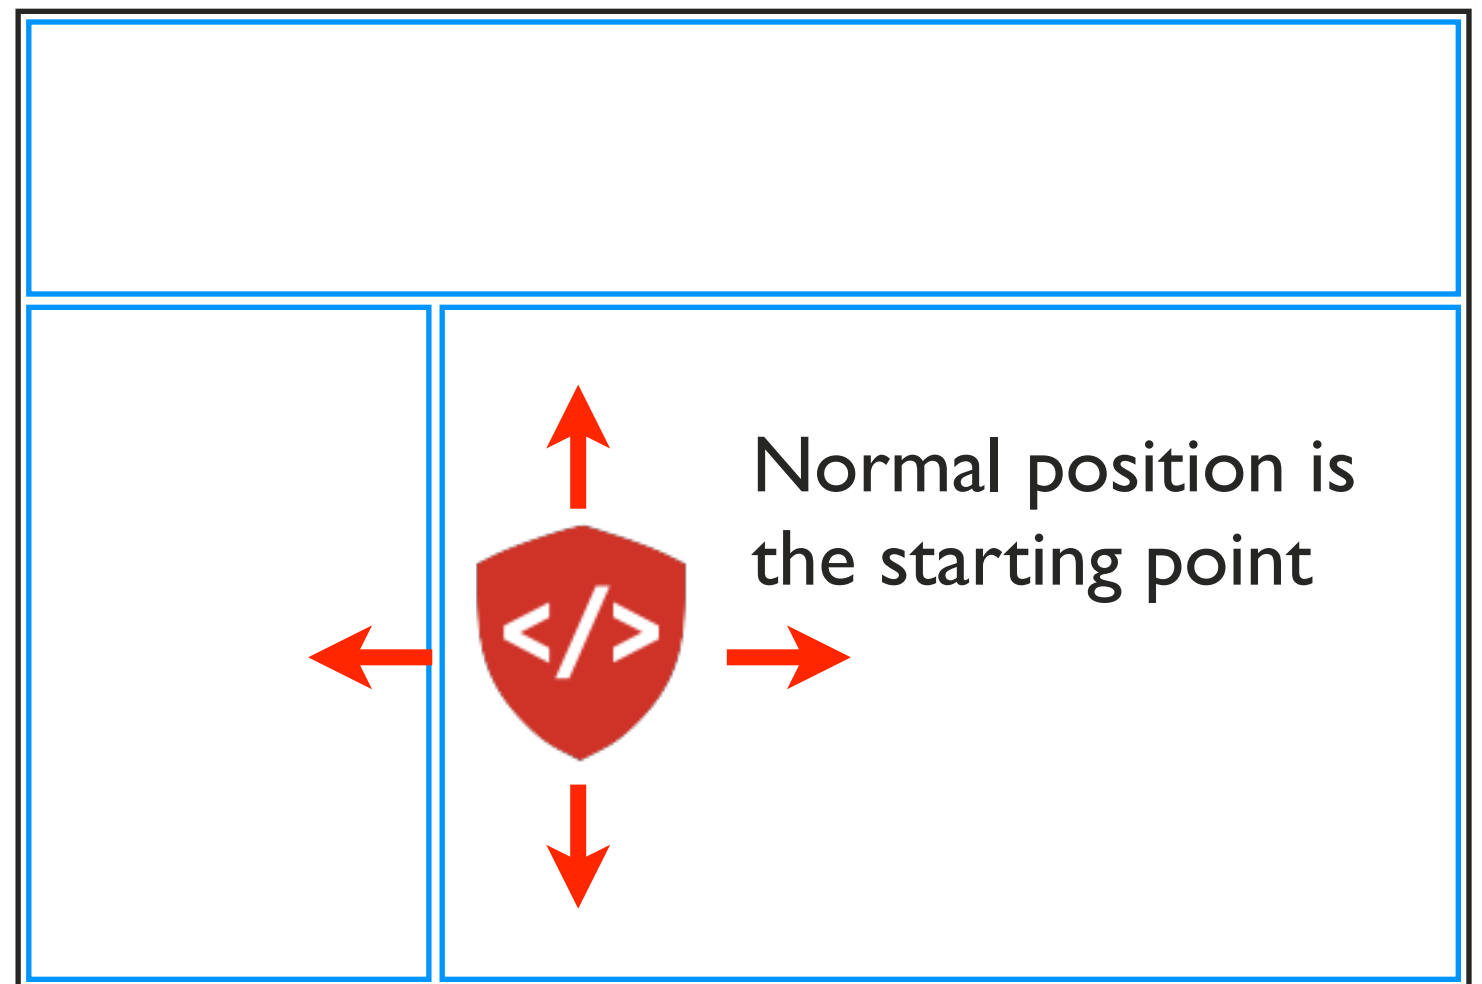

Positioning

An element can be positioned in 1 of 4 ways:

- **Static**

- **Relative**

Adjustments are made relative to the starting point

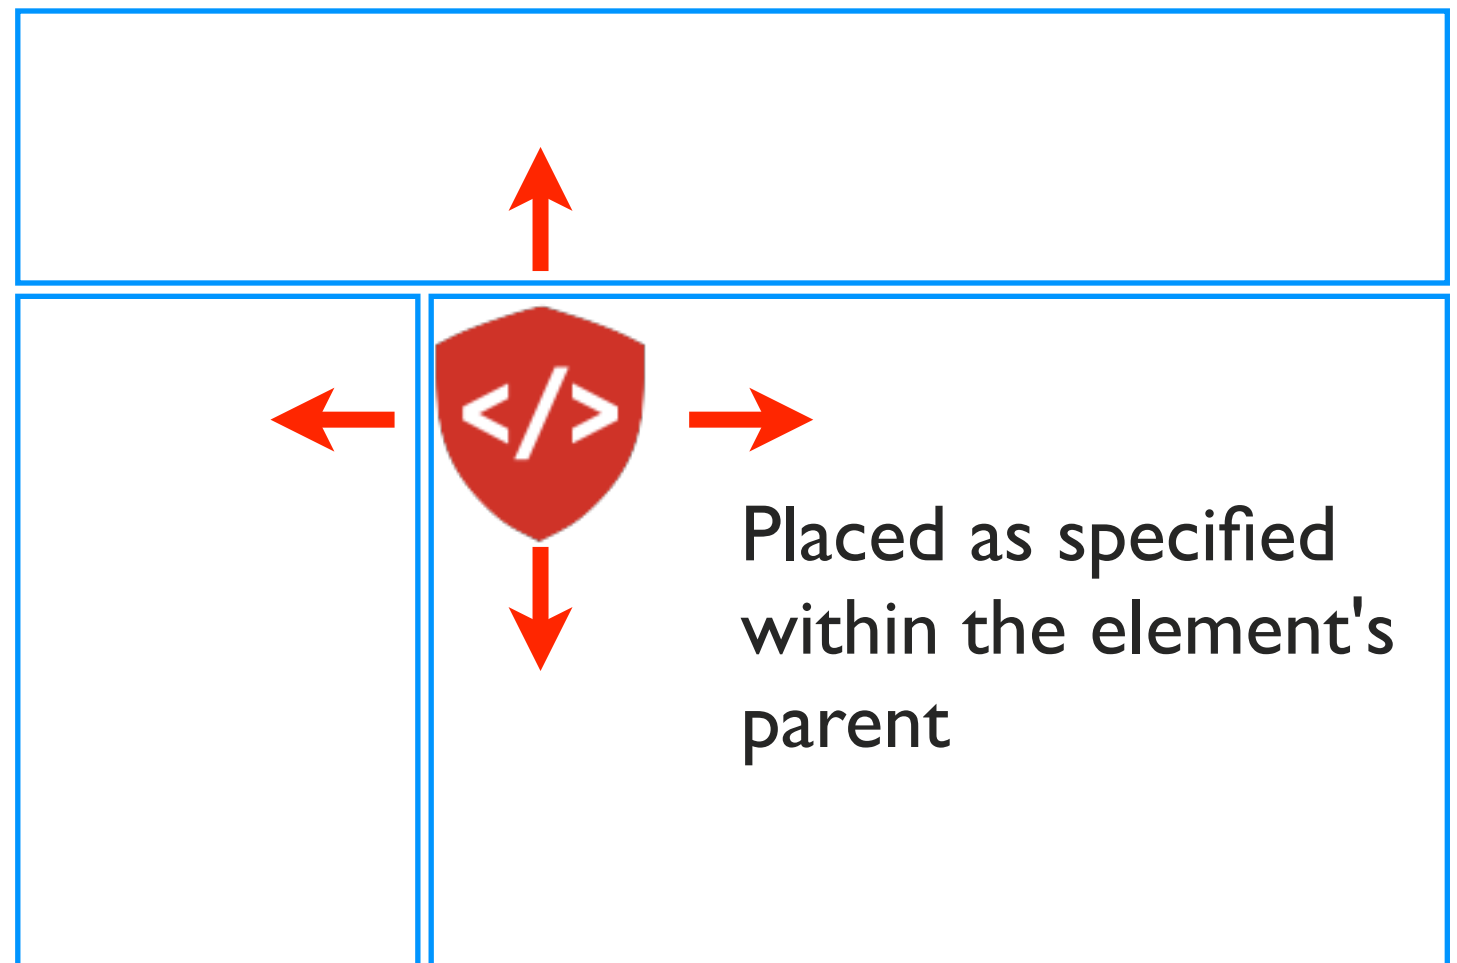

CSS

Positioning

An element can be positioned in 1 of 4 ways:

- Static
- Relative
- **Absolute**
Uses the top-left corner of the parent

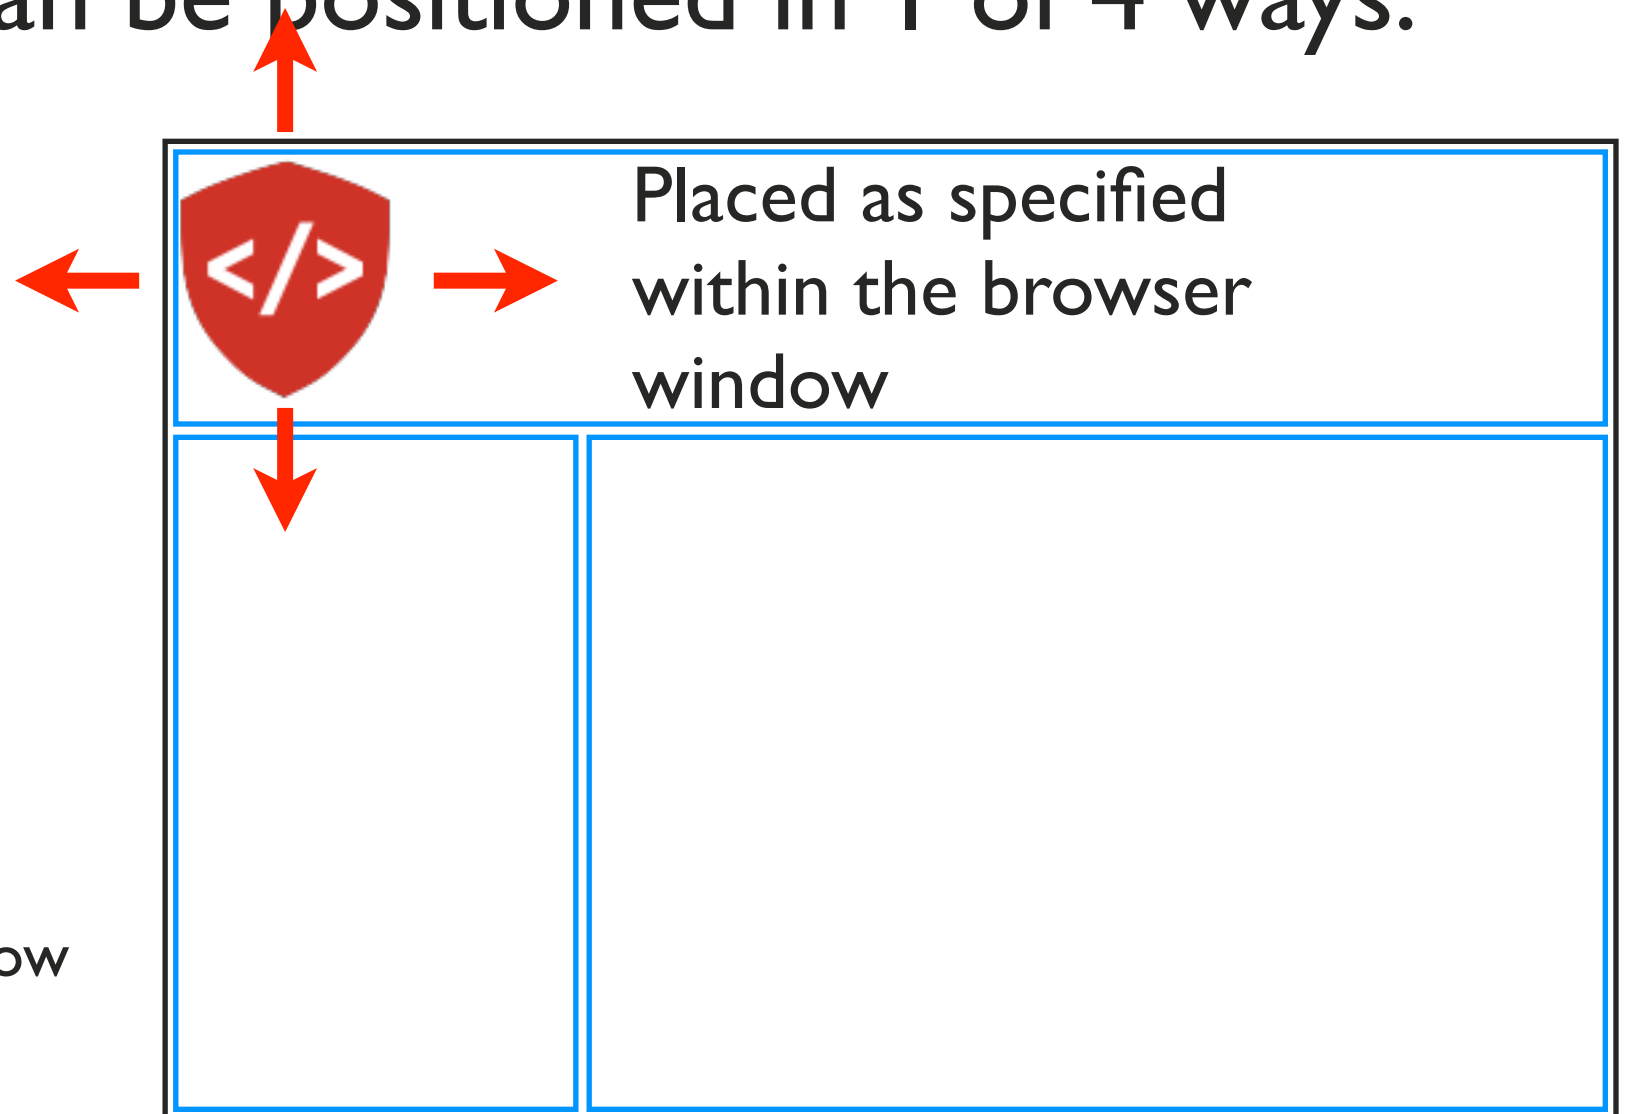

CSS

Positioning

An element can be positioned in 1 of 4 ways:

- Static
- Relative
- Absolute
- Fixed
Uses the top-left corner of the window

CSS

Positioning

The position of an element is affected in 3 ways:

- Position (top, bottom, left, right)
- Margin (negative #'s OK)
- Padding (only positive #'s)
